

EXPANSION JOINT

Product

Varel's Expansion Joints compensate for tubing movement or stress on tubing during injection or production applications. It enables relative movement between two fixed assemblies even after landing tubing hanger.

Features

- Can be pinned in open, closed or mid-stroke position
- Can be used in stacked applications
- Used for single or multiple string completions
- Pressure test at surface can be done before running to validate seal integrity

Options

- Available between different lengths
- Customizable seals configuration and material depending upon the application
