

# POLISHED BORE RECEPTACLE

## Product

Varel's PBR's compensate for tubing movement during different completions applications. It would also enable the circulation of lighter fluid for well production. This is designed specifically for completions that require a larger ID while also facilitating tubing movements.

## Features

- Can be pinned in open, closed or mid-stroke position
- Fullbore seal for larger ID and passage of intervention tools
- Tubing above the anchored packer can be retrieved for redressing and re-running of the seal assembly
- Pressure test at surface can be done before running to validate seal integrity

## Options

- Available between different lengths
- Adjustable Shear Release Mechanism
- Customizable seals configuration and material depending upon the application
